

Disaster risk governance in general includes institutions, mechanisms, policies and legal frameworks that direct, coordinate and oversee polices and systems relevant to disaster risk reduction in the country.

Due to its distinctive topographical attributes, Nepal is one of the highly vulnerable countries to natural disasters. Therefore, it is quintessential to prioritize disaster risk governance and to prepare for inevitable disasters.

NEPAL'S DISASTER CATEGORIZATION

Nepal's Disaster Risk Reduction and Management (DRRM) Act 2074 defines hazards and disasters into "natural" and "non-natural" categories.

Natural Disasters: Snowfall, hailstone, avalanche, glacial lake outburst flood (GLOF), extreme rainfall, low rainfall, flood, landslide and soil erosion, inundation, storm, drought, cyclone, cold wave, heat wave, lightening, earthquake, volcanic eruption, forest fire or other disasters from natural causes.

- Nepal ranks 4th in terms of climate change susceptibility; 11th in earthquake risk; and 31st in flood risk (Global Index)
- Nepal is one of the top 10 countries in the world in terms of disaster-related mortality (CRED)
- 2020 INFORM Global Risk Index reports that Nepal had an overall risk of 5.4/10, which INFORM categorizes in the "High" risk class

Non-natural Disasters: Epidemics, famine, forest fires, insect or micro-bacterial attack, animal and bird flu, pandemic flu, snake bite, animal attack, accidents related to mines, air, road, water or industrial accident; fire, toxic gas, chemical or radiation leakage, gas explosion, consumption of toxic foods, environmental pollution, deforestation, or physical infrastructure destruction, and accidents during disaster rescue, or other disasters emanating from non-natural causes.

MAJOR LEGISLATIVE MEASURES AND SYSTEM

With the enforcement of Natural Calamity Relief Act in 1982, Nepal was the pioneer country to implement disaster-specific act in the South Asia region and with time, Nepal has continued to adapt laws and policies relevant to Disaster Risk Reduction (DRR).

Constitution of Nepal. 2072 (2015)

Disaster risk reduction and management as sole authority of local government, and shared authority amongst federal, provincial and local governments.

DRR

Disaster Risk Reduction and Management (DRRM) Act 2017

Outline the roles and responsibilities of federal, provincial, and local governments to reduce disaster risks and manage the impacts

Local government operation Act 2017

Mandates provincial and local governments to oversee the disaster risk reduction and management aspects through Provincial level DRRM committee and local level committees in Palikas as well as at ward level

- Provides a comprehensive planning framework for disaster risk reduction and management, encompassing different priority areas and guiding government actors and stakeholders
- Ensures role of government bodies and private sector to effectively carry out disaster response activities

National Disaster Response Framework - NDRF

- Focus on effective and coordinated national response
- Sepcify relief distribution agencies as local governments and District Disaster Management Committees (DDMC)

STRUCTURAL SYSTEM OF DISASTER GOVERNANCE OF NEPAL

Hazards monitoring and forecasting Bodies

- Department of Mines and Geology (DMG)- Earthquake
- Ministry of Forest and Environment (MoFE)-Forest Fire and air pollution
- Department of Water Resource and Irrigation, the Department of Hydrology and Meteorology (DHM), and the Department of Mines and Geology (DMG) - flood and water induced disaster
- Ministry of Home Affairs (MoHA)
- Portal (DRR Portal, Bipad portal)

Disaster Preparedness, Preventing and Mitigating bodies

National Disaster Risk Reduction and Management Authority (NDRRMA)

Action Taking Institution and Bodies

- · Rural Municipality, Municipality, Sub-Metropolitan City, Metropolitan city
- Nepal Police, Nepal Army

International bodies where GoN (Council of Ministers) can appeal

- United Nations Office for the Coordination of Humanitarian Affairs
- Friendly nations, Red Cross Movement, regional offices, donor community, INGOs, international professional groups, and non-resident Nepalis

EMERGING APPROACH FOR DISASTER MANAGEMENT

Pre-existing disaster management system in Nepal includes Pre-Disaster Stage (preparedness) Emergency Stage (phase of catastrophe) Post Disaster (rehabilitation/ recovery). Additionally, emerging disaster management approaches include Community level Disaster Management Approach.

Community Level Disaster Management Approach

- Focus on community participation to mitigate disasters with active involvement of community itself in search, rescue and reconstruction
- Emphasize on community members to act as first responders during disasters
- Promote a bottom-up approach working with the top-down approach, to address the challenges and difficulties.
- Ensure self-reliance of local people and emergency management plans to meet local needs. Indigenous knowledge and innovation concerning hazards and mitigation play an important role in this.
- Community-based disaster risk reduction (CBDRR) approach to build resilient communities.
